

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (currently amended): A method for automatically creating at least one dialog-display box on an operator interface of a computer user station, which is connected to an industrial process installation via at least one interface so as to transmit data, wherein the dialog box displays the transmitted data of the process installation on the operator interface, the method comprising:

- a) automatically generating a dialog box;
  - b) selecting at least one data element to be displayed from the data that is transmitted from the industrial process installation in the dialog box;
  - c) indicating a memory address of the data element; and
  - d) assigning the transmitted data of the process installation that is to be displayed to certain, stored data types; and
- b)-e) creating-automatically generating the at least one dialog-display box on the operator interface of the computer user station so as to display the data to be displayed-utilizing display types that are respectively assigned to the data types.

2. (original): The method as claimed in Claim 1,

wherein the data is selected from the group consisting of process data, status data, control data and regulating data; and

wherein the display types are selected from the group consisting of pointers, bars, and numeric displays.

3. (currently amended): The method as claimed in Claim 1, wherein the ~~dialog~~dialog display box is retrieved on the operator interface of the computer user station via a link identifier of a further ~~dialog~~dialog display box.

4. (currently amended): The method as claimed in Claim 3,

wherein the further ~~dialog~~dialog display box is assigned to a library stored in the computer user station.

5. (currently amended): The method as claimed in Claim 3,

wherein the further ~~dialog~~dialog display box is created via a supporting graphics program.

6. (original): The method as claimed in Claim 1,  
  
wherein the transmitted data that is to be displayed is selected from the transmitted data  
of the process installation.

7. (currently amended): The method as claimed in Claim 1, further comprising:  
  
modifying ~~an~~ the assignment of the data types and the display types.

8. (original): The method as claimed in Claim 1, further comprising:  
  
modifying a number and a type of the display types.

9. (original): The method as claimed in Claim 1, further comprising:  
  
modifying a number and a type of the data types.

10. (currently amended): A method, comprising:  
  
assigning data, which are transmitted from a technical facility to a computer, to  
respective data types stored in the computer;  
  
assigning the data types to respective display types; and

automatically generating at least one ~~dialog~~display box on a graphical user interface of the computer so as to display the data on the graphical user interface with the data types and the display types.

11. (new): The method as claimed in Claim 1, wherein the data types define various types of data present in the installation process and wherein the transmitted data is categorized into one of the data types.

12. (new): The method as claimed in Claim 1, wherein the assignments between the data types and the display types are pre-stored in the computer user station.

13. (new): The method as claimed in Claim 1, further comprising a user modifying the pre-stored assignments between the data types and the display types.
